

Evolution or Creation The Great Debate

The quest to understand where we have come from has been the challenge to mankind down through the centuries.

The arguments continue on today, between scientist and theologians; in the pub and in the workplace.

One would think that with the advance of knowledge through science and astronomy we would be much closer to the answer. It seems however that with each advance we see how much bigger the mystery is.

Recently it was reported that a doctor who has been studying DNA apologised in a newspaper article that where he had always believed there is no God,

but came to the conclusion that because of the complexity of the DNA strand, we have not come about by accident or evolution. With the advances in astronomy, we now know that our world is so tiny amongst the hugeness of the universe, it wouldn't even be spotted amongst the millions of stars in the Milky Way.
